

MHP 3100

Semi-automatic networked combination scale

Maximum packaging speed

24 or optional 28 weighing belts

ROI within 3-12 months

Suitable for small packs

MHP 3100

Semi-automatic combination scale

With the semi-automatic combination weigher MHP 3100, pre-filled or empty small packages of table grapes or tomatoes are precisely completed with the missing weight. The amount of wasted goods and the required time can be kept to a minimum.

The first row with 12/14 weighing belts are loaded with the products by one worker. The scales installed in the infeed conveyor record the weight of the incoming trays in real time and determine the missing weight. The products that reach the weight are then automatically transported to the conveyor belt to be finally filled into the punnets by a worker.

In order to guarantee the quality of the products, these products are manually filled into the punnets.

The MHP 3100 is a flexibly applicable weighing system which, in addition to completion, has the operating modes equalisation on belt scales, combination weighing and throughput.

The MHP 3100 offers a significant increase in efficiency in the packaging process. A possible overweight of the packaging will be reduced to less than 1%. The automatic output of the goods saves an immense amount of time and resources.

This noticeably reduces costs and increases profits. In conjunction with the TopControl software, all weight data and personnel times are recorded and flexibly evaluated.

HIGHLIGHTS

Maximum packaging speed

Profit maximisation

ROI within 3-12 months

Suitable for small packaging

Maximum reduction of the giveaway

Flexible applicable

Even more than 40 packs/minute

Packing according to WELMEC 6.4 (e-weight) for pre-packed goods

Robust and hygienic construction stainless steel construction IP65

Intuitive Touchdisplay

Efficient working time recording through integrated transponder reader

Optimal integration into the TopControl software for recording and evaluating the data

TECHNICAL FEATURES

COMBINATION SCALES	24 OR OPTIONAL 28 WEIGHING BELTS
Load capacity/division weighing belts	6 kg/2g (optional 3 kg/1 g)
1 built-in scale in the infeed conveyor	Load capacity/division: 6 kg/2 g (optional 3 kg/1 g)
Max. Tray size (L x W)	220 x 190 mm
Operating modes	Pass through, combination, complete, product mix
Running direction	right/left or left/right
Display	Colour LCD touch display 7 inch
System interfaces	Ethernet 10 Base T, TCP/IP
Protection class	IP65
Unit design	Compact modular design in stainless
(!) Non-verifiable scales for internal use	

Version	Running direction		Crate storage	Crate storage on top
	left-right	right-left		
MHP 3100 with 24 or 28 weighing belts	x	x	x	x

Weighing belts

The weighing belts of the MHP 3100 are available in the dimensions (L x W):

24 belts: 250 x 130 mm

28 belts: 250 x 100 mm

These are used to calculate the optimum weight with the minimum giveaway and to transport the product onwards.

Ergonomic crate storage

To ensure fast and optimised work, optional, ergonomically adapted crate trays can be mounted on the combination weigher. The incoming products can be placed on these. The settings enable a comfortable working method that has been thought through as a whole.

The workers have the full crates at their fingertips.
