

Weighing, packing and labelling solutions are networked with foodProcess and can be controlled remotely.

## YOUR ADVANTAGES AT A GLANCE

**MORE EFFICIENCY. MORE PROFIT. MORE CONTROL.**

The introduction of foodProcess pays off quickly – measurably and sustainably:

## foodProcess ECONOMIC EFFICIENCY & SUSTAINABILITY

... reduces costs and increases planning reliability  
 ... ensures lower operating costs  
 ... reduces giveaways through optimised weight control  
 ... accurately records working hours, thereby saving labour costs.  
 ... improves planning and ensures faster delivery  
 ... reduces packaging material and avoids overproduction  
 ... reduces rework and minimises callbacks  
 ... provides better reporting for customers and authorities.

**Sample calculation:** 10 employees lose 5 minutes of time with each order change.

10 people x 5 minutes x 10 orders x 150 days = 1,250 hours ≈ €27.500 per line per year Costs for order changes

With 4 lines in the packing house, this amounts to ≈ €110.000 per year that can be saved with foodProcess.

## INNOVATIVE PRODUCTION CONTROL SOFTWARE FOR GREATER PROFITS THROUGH > PRODUCTIVITY & > TRANSPARENCY (MES-PPS-BDE)

Real-time monitoring and control of your packing station

Clear production monitoring

Intuitive process configuration

Simple and accurate traceability

EN

## THE CHALLENGES FACING THE INDUSTRY GROWING DEMANDS – YOUR PRODUCTION UNDER PRESSURE

Fruit and vegetable processors face enormous challenges today:

- Rising prices for raw materials, energy and packaging
- Skills shortage and high personnel costs
- Ever shorter delivery times and high expectations from food retailers
- Complex processes with changing orders
- Sustainability and traceability as standard

## DIGITAL INTELLIGENCE FOR GREATER EFFICIENCY, TRANSPARENCY AND PROFIT IN THE PACKAGING PROCESS

With foodProcess, you can digitise your entire packaging process – from order receipt to finished pallet. The system seamlessly connects your office, packing hall, employees and machines, creating a new dimension of control, efficiency and transparency.

foodProcess helps you turn these challenges into opportunities – with well-thought-out digitisation, real-time data and complete process control.

## THE DIGITAL HEART OF YOUR PACKAGING LINE

foodProcess is an intelligent MES and production management system (PPS) developed specifically for fruit and vegetable processors. It links all production processes into a single digital solution:

- Order management: digital, clear, error-free
- Production control: live on the touch panel directly on the line
- Device control: automatic adjustment of scales, labellers, lines
- Employee and time recording: performance-based and transparent
- Statistics & analysis: all KPIs at a glance

- Traceability: seamless and legally compliant
- Overfill and waste: Quickly identify and reduce inefficiencies.
- Goods flow: Core function for recording and managing deliveries in inventory and supply chain management.
- Data exchange: Real-time connection of your ERP system to foodProcess – your central enterprise solution.

**With foodProcess, you always know what is being produced, by whom and with what results – EVERYTHING AT A GLANCE.**

SMART-LINE  
SOLUTION

## SMART OFFICE & SMART LINE SOLUTION

Central planning meets decentralised control: this is how packaging works in today's digital world – efficiently, error-free and traceable.

### IN THE OFFICE (SMART OFFICE):

- Digital order creation or direct transfer from ERP
- Production planning with a clear overview of all lines and orders
- Reports, evaluations and data exports for management and QA
- Connection to warehouse, scales, labellers, scanners and more

### IN THE PACKING HALL (SMART LINE):

- Live production data on the touchscreen
- Real-time control of lines, machines and weighing
- Display of customer requirements, article information and remaining times
- Employee registration with time recording and performance data
